

EDUCATION

University of Toronto

BASc, Engineering Science (Honors)
Robotics major · Minors in AI and Business
2023 · Toronto

SKILLS

MODELS

PyTorch · HuggingFace · ONNX
Runtime · LoRA / PEFT fine-tuning ·
post-training · quantization · TTS / STT
voice models · LLMs and retrieval
(RAG) · computer vision

INFERENCE

Real-time streaming inference ·
latency profiling · time-to-first-token
tuning · managerial inference endpoints
· distributed GPU training · LiveKit
voice pipelines · TorchScript

DATA & EVALS

Dataset curation from production
traffic · labeling pipelines · gold eval
sets · adversarial test design ·
production A/B testing · inference
cost and capacity modeling

PRACTICE

Python · SQL · mypy / ruff · Docker

RESEARCH

Undergraduate Thesis

Toronto Intelligent Systems Lab, UoT ·
2022 – 2023

- Joint TISL and Toyota Research Institute project on autonomous racing.
- Learned online adaptation as track conditions shift at run time.
- Advised by Prof. Igor Gilitschenski (TISL).

Machine Learning Summer Researcher

University of Toronto · May – Aug 2020

- Evaluated 25+ detection models; lifted recall 10%.
- Shipped a 94%-recall real-time pipeline to Incheon Airport.
- Won a UoT fellowship award.

EXPERIENCE

Models & Inference, Sadie AI

Apr 2026 – Present · Toronto

Voice AI for hospitality, live in 1,500+ restaurants and hotels

- Dropped first-sentence latency from 218 ms to 22 ms by warming models at session start; benchmarked GPU endpoints to low-200 ms p50 time-to-first-token.
- Shipped an int8 ONNX classifier (40% to 87% accuracy) that cut per-turn LLM tokens 20% input and 33% output on live production calls.
- Cut LLM spend ~55% with a targeted inference migration, validated independently by finance to within 4%.
- Fine-tune models for specific verticals so restaurants, hotels, and car rental each book in their own language.
- Own the data path end to end: mine production calls, build labeling pipelines, and freeze gold eval sets before every training run.
- Stabilized turn-to-turn delivery, cutting acoustic discontinuity 72% on production call replays.
- Killed two costly bets early with data, not opinion, using traps the baseline fails by design.

Technical Co-founder & AI Lead, Ampliphi

Jan 2025 – Apr 2026 · Toronto

A Valsoft company

- Owned the complete MVP: backend, ML and LLM architecture, and the end-to-end AI team.
- Built the platform from 0 to half a million ARR in under a year, with focus on the US, Canada, and Australia.
- Shipped demand forecasting, compression-event consolidation, and dynamic pricing to 100+ hotels.
- Layered LLM pricing insights and LLM-extracted event signals into demand forecasts.
- Hired and led the AI team, owning the evaluation bar every model cleared before it touched customer pricing.

AI Solutions Lead, Valsoft Corporation / Aspire Software

Jun 2023 – Apr 2026 · Toronto

AI Founding Engineer (2023) · AI Solutions Architect (2024) · AI Solutions Lead (2025)

- First AI hire; built Valsoft's M&A sourcing platform on LLM extraction and retrieval.
- Turned it into a repeatable acquisition-sourcing engine, funded by parent firm Valsef.
- Grew from sole contributor to owning AI architecture across the portfolio.
- Shipped AI features from prototype to revenue with portfolio SaaS teams.

AI Research Engineer, Noah's Ark Lab, Huawei

Jun 2021 – Sep 2022 · Markham

- Shipped a learning-based planning stack for Huawei's self-driving system.
- Reproduced state-of-the-art planning papers from scratch as internal team baselines.
- Orchestrated distributed training across GPU clusters and large multimodal datasets.
- Built a modular closed-loop CARLA simulator for training and offline evaluation.
- Contributed to team patents on learning-based autonomy.

SELECTED PROJECTS & EARLY EXPERIENCE

Computer Vision Lead, Autonomous Rover Team

UoT Robotics Association · 2021 – 2022

Led vision pipelines for two IGVC competition rovers; deployed detection and classification with TorchScript; managed a 15-person team.

Junior Machine Learning Engineer

Omdena · Jul – Sep 2020

Built satellite-imagery ML for malaria prevention with Zzapp Malaria, winner of the \$5M IBM Watson AI XPRIZE.

Software Developer

sMart, Student Marketplace · Jul – Oct 2020

Built a student-mentor marketplace with personalized mentor recommendations. Django, React.
