

EDUCATION

University of Toronto

BASc, Engineering Science (Honors)
Specialization in Robotics and AI
Minor in Business

2018 – 2023 · Toronto

SKILLS

MACHINE LEARNING

PyTorch · HuggingFace · LLMs & RAG ·
Fine-tuning (LoRA / PEFT) ·
Quantization · Computer Vision

REAL-TIME & VOICE AI

Real-time streaming inference · TTS /
STT voice models · WebRTC / LiveKit
pipelines · Latency & throughput
optimization · ONNX Runtime

DATA & EVALUATION

Dataset curation & labeling pipelines ·
Eval harness & benchmark design · A/B
testing · Cost & capacity modeling

AI-NATIVE DEVELOPMENT

Claude Code · Cursor · Codex · MCP
server design · Context engineering ·
Eval-gated agent workflows

ENGINEERING

Python · SQL · Docker · CI/CD · AWS /
GCP

RESEARCH

Undergraduate Thesis

Toronto Intelligent Systems Lab [UofT](#) ·
2022 – 2023

- Joint TISL and [Toyota Research Institute](#) project on autonomous racing.
- Learned online adaptation as track conditions shift at run time.
- Advised by Prof. Igor Gilitschenski (TISL).

Machine Learning Summer Researcher

University of Toronto · May – Aug 2020

- Evaluated 25+ detection models; lifted recall 10%.
- Shipped a 94%-recall real-time pipeline to Incheon Airport.
- Won a UofT fellowship award.

SELECTED PROJECTS & EARLY EXPERIENCE

Computer Vision Lead, Autonomous Rover Team

UofT Robotics Association · 2021 – 2022

Led vision pipelines for two IGVC competition rovers; deployed detection and classification with TorchScript; managed a 15-person team.

EXPERIENCE

Models & Inference, [Sadie AI](#)

Apr 2026 – Present · Toronto

Voice AI for hospitality, live in 1,500+ restaurants and hotels

- Cut first-sentence latency 218ms to 22ms; benchmarked GPU endpoints to low-200ms p50 time-to-first-token.
- Shipped an int8 ONNX classifier (40% to 87% accuracy) that cut per-turn LLM tokens 20% input and 33% output on live production calls.
- Cut LLM spend ~55% with a targeted inference migration, validated independently by finance to within 4%.
- Fine-tune models for specific verticals so restaurants, hotels, and car rental each book in their own language.
- Own the data path end to end: production call mining, labeling pipelines, frozen gold eval sets.
- Killed two costly bets with data, not opinion, using traps the baseline fails by design.

Technical Co-founder & AI Lead, [Ampliphi](#)

Jan 2025 – Apr 2026 · Toronto

Dynamic pricing & AI demand aggregator for hospitality · A Valsoft company

- Owned the complete MVP: backend, ML and LLM architecture, and hiring and leading the AI team.
- Built the platform from 0 to half a million ARR in under a year, focused on boutique hotels and hotel chains across the US, Canada, and Australia.
- Shipped demand forecasting, compression-event consolidation, and dynamic pricing to 150+ hotels.

AI Solutions Lead, [Valsoft Corporation](#) / [Aspire Software](#)

Jun 2023 – Apr 2026 · Toronto

AI Founding Engineer (2023) · AI Solutions Architect (2024) · AI Solutions Lead (2025)

- First AI hire at a serial software acquirer; built the M&A sourcing engine on LLM extraction and retrieval, funded by parent firm Valsef.
- Ran AI across portfolio SaaS companies, prototype to revenue: support triage, document extraction, data-migration mapping, inherited-codebase comprehension.
- The reusable asset is the harness, not the model: eval sets, labeling pipelines, and cost patterns transfer; the last mile is rebuilt per company.
- Grew from sole contributor to owning AI architecture across the portfolio, setting the bar every model cleared before reaching a customer.

AI Research Engineer, [Noah's Ark Lab](#), Huawei

Jun 2021 – Sep 2022 · Markham

- Shipped a learning-based planning stack for Huawei's self-driving system.
- Trained large planning models end to end: multimodal data pipelines, distributed GPU runs, and a modular closed-loop CARLA simulator for RL training and offline evaluation.
- Benchmarked imitation learning against reinforcement learning for planning; reproduced state-of-the-art papers as team baselines.
- Contributed to team patents on learning-based autonomy.

Junior Machine Learning Engineer

Omdena · Jul – Sep 2020

Built satellite-imagery ML for malaria prevention with Zzapp Malaria, winner of the \$5M IBM Watson AI XPRIZE.

Software Developer

sMart, Student Marketplace · Jul – Oct 2020

Built a student-mentor marketplace with personalized mentor recommendations. Django, React.
